

Old article LaTeX code

This is almost entirely taken from this excellent repository. I just made a few style changes to make it more in line with articles of the time. All the heavy lifting, such as the excellent font design, is done by the linked repository.

List of changes made (off the top of my head):

- Changed page margins to `[margin=1in]`
- Removed line underneath header with `\renewcommand{\headrulewidth}{0pt}`
- Fixed a double period after subsections
- Redefined section/subsection design in line with those from the time in economic journals such as *The Quarterly Journal of Economics* and *The Economic Journal*
- Odd/even page number split
- Removed neon coloring around hyperlinks in .pdf output by setting
- Added user-configurable SHORT TITLE that can be defined in the main .tex file. Previously this was defined as the section header. `[hidelinks]` argument in `hyperref` package.
- May have made a few other changes. Exact changes can be seen by comparing `antiquebook.cls`.
 - If you wish to make any further adjustments, this is the file to edit.

A few important notes

- From the original repo: Try to place the files in the project directory rather than putting them in the texlive/miktex installation directory to make it globally accessible. Otherwise you may break your system.
- **THIS PACKAGE WILL NOT WORK UNLESS YOU COMPILE WITH XELATEX**
 - The .pdf output will still work. It just will be in plain boring Computer Modern font and you'll be wondering what the point was of installing this.
 - In order to get the nice old fonts etc., you must change your LaTeX compilation engine from the default `pdflatex` to `xelatex`. For VimTeX users, I have added the magic comment `%! TeX engine = xelatex` so it should work on first run.

Huge thank you to the original author of this package. It is really incredible how similar the typeface looks to articles from the 1930s.
